Heuristic Evaluation Notes 2–3

Screen	Problem Details	Severity	Heuristic Violated	Resolve Plan
Settings Page 	The existence of this page is something that we can avoid and is confusing for the user for the first time.	4	- Visibility of system status; - Aesthetic and minimalistic design; - Flexibility and efficiency to use.	"Edit Interests" can be moved to the "User" page or being showed for the first time the user log ins. Basic map setting, for example choosing the specific date, can be seen directly on the map.
Main Page – Results After Search 	The transition from the "search" page to the "main page" can be unclear for some users because the app does not show that the "search" was successful and the pins on the map actually represent "HCI".	3	- Visibility of system status.	When the user is being returned from the search page to the main page – the words that are being searched should stay in the search bar. Also, instead of the pins, we could use communities icons with its names next to it.

Screen	Problem Details	Severity	Heuristic Violated	Resolve Plan
User Page 	Users could potentially experience problems with navigating the many saved events.	2	- Recognition rather than Recall; - Flexibility and Efficiency to use.	Let users be able to see “Saved Events” dates instead of opening the event itself to see the day of happening. Also, give the possibility to sort events by date (would be helpful if user has many saved events).
Log In Page	Log In Button	1	- Aesthetic and minimalistic design;	Increase the font for better readability and make the corners of a button rounder.
Main Map 	I would personally prefer to see the standard map colours.	1	- Consistency and Standards.	Use the Google Maps as the main map for the “Main Page” and put communities/ events icons on top of it.
